

Custom Design Process Made Easy

Get started for just \$500

1. Send us a copy of some designs you like on-line or pictures from your friends.
2. We can send you renders of some designs we can build along with estimates.
3. Approve the design and we can use a 3D printer to create your design in a green resin you can actually try on.
4. Once you approve the wax, we can cast your ring in one of several noble metals- gold, silver, platinum or our proprietary Millennial Silver- a mix of palladium and sterling (to create a white ring that will not tarnish and is much harder than plain sterling silver.)
5. We will then select and perfectly cut Passion Fire diamonds to set into your ring.
6. Once cast we will polish and set the diamonds in our showroom/jewelers shop.

We ask for a \$500 deposit which goes toward the ring to start the process for a CAD model and a 3D production of the design.

This goes toward the final price of your design. Most rings run \$1,500-2,000 in 14kt white gold, \$700-1200 in Millennial Silver.
