

FAQ

How do spray tans work? - The active ingredient in all spray tan solution is DHA, a colorless sugar that darkens the skin through staining. DHA reacts with amino acids in the outermost layer of your skin. As these dead skin cells naturally wear off, the color gradually fades, just like a genuine sun tan.

How long does a spray tan appointment take? - About 30-40 minutes.

How long will my spray tan last? - Anywhere from 7-14 days depending on your skin and skin care routine. Maintaining your tan plays a big part in tan longevity.

How long do I leave my spray tan solution on? - The longer the better. Anywhere from 8-24 hours. 1-4 hours with the express solution, do not exceed 5 hours with express solution. (Please note that express solution takes 24 hours to fully develop after being rinsed.)

Will my tan look streaky or orange? - If you have followed the prep instructions, you will not have a streaky tan.

What do I wear after my appointment? - Dark loose clothing. I recommend loose cotton sweats, shorts, tank tops, maxi dresses etc.. Jeans, bras and tight clothing can rub your tan off and leave weird streaks.

Pricing

\$30 New Clients - Full Body

\$35 Full Body

\$25 High School Students

\$45 Mobile- Full Body

(Brentwood, Oakley, Bethel Island, Antioch, Discovery Bay, Pittsburg, Byron & Knightsen)
